The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).					
Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1, 2, 9 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Masashi (Foreign Patent Document JP-09-161489 cited by Applicant).

Masashi discloses a compound storage circuit and a semiconductor device having all the elements as recited in claims 1, 2, 9 and 10 as follows:

a volatile storage circuit (11) and a nonvolatile storage circuit (12) connected in parallel and that is arranged such that information equal to storage information stored in the volatile storage circuit is stored into the nonvolatile storage circuit, the compound storage circuit comprising a determined circuit (13) for comparing first storage information stored in the volatile storage circuit with second storage information that has already been stored in the nonvolatile storage circuit (Abstract, lines 4-5) when the storage information stored in the volatile storage circuit is written into the nonvolatile storage circuit, wherein the first storage information is written into the nonvolatile storage unit only when the first storage information is not equal to the second storage information (Abstract, lines 10-13);

Art Unit: 2827

comparison determination means (comparator 13) and writing means (Abstract, lines 12-13).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 3-8 and 11-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Masashi in view of Brandin

Masashi discloses all the limitations of claims 3-8 and 11-18 except for the nonvolatile storage circuit including a magnetic tunnel junction element as storage means and the storage information stored in the volatile being written into the nonvolatile storage circuit when power supplied to the nonvolatile storage circuit is reduced and the storage information stored in the nonvolatile storage circuit being returned into the volatile storage circuit when power supply resumes. However, the use of a magnetic tunnel junction as storage means is well-known in the art for storing nonvolatile data and Brandin discloses data transferred from the volatile memory to the nonvolatile memory when the power is interrupted and the data transferred from the nonvolatile memory to the volatile memory when the power resumes to save data during power interruption. It would have been obvious to one having ordinary skill in the art to use a magnetic tunnel junction element as storage means to store the nonvolatile data

Art Unit: 2827

and to use the nonvolatile memory to transfer data from the volatile memory when the power is interrupted and transfer data from the nonvolatile memory to the volatile memory when the power resumes to save data during power interruption.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huan Hoang whose telephone number is (571) 272-1779. The examiner can normally be reached on Tues-Fri 8:30AM-7:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amir Zarabian can be reached on (571) 272-1852. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
